

# INITIAL LANGUAGE EVALUATION REPORT

**LOURTEAU Cédric**

| Candidate         | LOURTEAU Cédric                            |
|-------------------|--------------------------------------------|
| Email             | cedric.lourteau@mbws.com                   |
| Department        | R&D                                        |
| Job Title         | Resp. Développement Pack & Indus           |
| Written Test Date | 16 December 2025                           |
| Oral Session Date | 15 January 2026                            |
| Evaluator         | Joss — Linguaid France                     |
| Report Type       | Final Combined Evaluation (Written + Oral) |

## 1. Executive Summary

Following the completion of both the written placement test (16 December 2025) and the oral assessment session (15 January 2026), this report presents Cédric LOURTEAU's consolidated English language profile across all five assessed skill areas.

The combined evaluation reveals a **split-level profile** that places Cédric between **A2+ and B1** overall. His written test results — anchored at **B1** through MCQ performance — are now contextualised by oral assessment data that consistently returned **A2-level** performance across listening, speaking, fluency, grammar, vocabulary, and interaction. Pronunciation was the sole oral criterion to reach **B1**, confirming that Cédric's phonological awareness is ahead of his productive and receptive oral competence.

This discrepancy between written and oral results is diagnostically significant: it suggests that Cédric has **internalised certain grammar rules at a recognition level** — sufficient to perform adequately in a multiple-choice format — but has **not yet transferred this knowledge into fluent, spontaneous language use**, whether spoken or written. His productive output across both modalities remains limited in complexity, range, and development.

## | Overall CEFR Profile Summary

| Skill                | Level |
|----------------------|-------|
| Reading / Vocabulary | B1    |
| Grammar (receptive)  | B1    |
| Writing (productive) | A2+   |

|                      |                     |
|----------------------|---------------------|
| Listening            | A2                  |
| Speaking             | A2                  |
| Combined Final Level | A2+ / B1 (Lower B1) |

### > **Assigned Training Entry Level: A2+ — Lower B1**

> Cédric enters the training programme at a functional but fragile intermediate threshold. He understands and produces simple English around familiar topics but requires significant structured support to bridge the gap between passive grammatical knowledge and active, confident communication — particularly in oral professional contexts.

## 2. Skill-by-Skill Assessment

---

### | 2.1 Reading and Vocabulary

#### **Assessed Level: B1**

#### **Strengths**

- Cédric achieved a **total MCQ score of 18/30 (60%)** on a placement test that includes reading-dependent items, confirming an ability to process moderately complex written English at sentence level.
- He demonstrates adequate comprehension of **familiar, everyday topics** — personal biography, workplace contexts, and common professional situations — at a level consistent with B1 reading.
- Texts built on high-frequency vocabulary (work, study, travel, hobbies) present no significant barrier to comprehension.

#### **Development Areas**

- **Active vocabulary range is narrow:** productive use is limited to basic, high-frequency words (*work, live, practice, study, travel*). No professional or technical vocabulary is present in written output.
- **No evidence of sector-specific language:** given Cédric's role in packaging development and industrial R&D, the complete absence of field-related terminology (e.g., *supply chain, prototype, compliance, specification, stakeholder*) represents a meaningful professional communication gap.
- Reading comprehension will likely **deteriorate rapidly** when faced with longer, denser, or more formal documents — technical reports, procurement specifications, or cross-functional project briefs.

- **No idiomatic language, collocations, or phrasal verbs** appear in written output, suggesting that passive vocabulary recognition has not extended into active lexical use.
- French interference remains present: the use of *VTT* (Vélo Tout Terrain) without English equivalent (*mountain biking*) indicates a habit of defaulting to French when English terms are not immediately available.

## | 2.2 Writing

**Assessed Level: A2+**

### Strengths

- Cédric's writing is **consistently intelligible**: the intended meaning is always recoverable, which constitutes a genuine communicative foundation.
- **Past simple verbs are accurately formed** (*"I lived"*, *"I studied"*), suggesting this tense has been internalised at a productive level.
- *Modal construction* would like + infinitive\*\* is *correctly and naturally deployed* (*"I would like to travel around the world"*), demonstrating awareness of polite and aspirational register.
- A degree of **communicative creativity** is visible in the rhetorical use of repetition (*"Travel, travel, travel..."*), showing personality and intentionality in written expression.

### Development Areas

- **Responses are critically short**: all three written answers total fewer than 60 words combined — significantly below B1 expectations, where a developed paragraph per response would be the norm.
- **Article omission is systematic**: *"I work in Développement département"* and *"I lived in countryside"* both lack required articles (*the*). This is a high-frequency, high-priority error pattern for French-speaking learners.
- **Preposition inaccuracy**: *"at 30 min of Bordeaux"* reflects a direct French calque (*à 30 min de Bordeaux*); correct English form is *"30 minutes from Bordeaux"*.
- **French orthographic interference**: *"Développement"* (correct: *development*) and *"familly"* (correct: *family*) indicate that English word forms on common cognates have not yet been consolidated.
- **Syntactic complexity is absent**: no subordinate clauses, relative clauses, conditionals, passive constructions, or discourse connectors appear in any response. Writing is entirely comprised of short, declarative, paratactic sentences.
- **No professional register**: no vocabulary, structural choices, or tonal features appropriate to a professional B1 writer in an R&D environment are present.

## | 2.3 Grammar

**Assessed Level: B1 (receptive) / A2+ (productive)**

### Strengths

- A **60% MCQ score** confirms that Cédric can **recognise** a range of intermediate grammar structures in context, including tense distinctions, modal forms, and common sentence patterns.
- **Basic subject-verb agreement** is consistently maintained across all written responses — a foundational rule that appears fully internalised.
- **Present simple** for habitual action and **past simple** for completed events are both produced correctly, suggesting core tense knowledge is in place.

### Development Areas

- The **40% error rate on MCQ items** points to unreliable control over the following structures:
- **Passive voice** (*It was developed, The report is being reviewed*)
- **Second conditional** (*If I were responsible, I would...*)
- **Present perfect vs. past simple** distinction (*I have worked here since 2019 vs. I worked there last year*)
- **Reported speech** (*She said that she had completed the report*)
- **Discourse connectors** (*however, therefore, despite, although*)
- A **significant receptive-productive gap** exists: structures that can be identified in MCQ format are not yet available for spontaneous written or spoken production.
- **Article and preposition systems** require explicit, sustained instruction — these represent the most consistent and impactful error types across the entire written sample.
- **No complex syntax is produced:** absence of subordination, relativisation, or conditionals in any written response confirms that grammar knowledge has not yet transferred to generative use.

## | 2.4 Listening

**Assessed Level: A2**

### Strengths

- Cédric was able to follow **simple, clearly articulated speech** on familiar topics during the oral session, demonstrating baseline receptive capacity in spoken English.
- He showed willingness to engage and to seek clarification when needed, which reflects a positive and constructive approach to comprehension challenges.

### Development Areas

- Listening comprehension at **A2** indicates that Cédric currently manages only **slow, simple, and highly predictable spoken input** reliably. Connected speech, reduced forms, and natural delivery pace present significant comprehension barriers.
- There is a notable gap between his **written reading level (B1)** and his **oral listening level (A2)**, confirming that exposure to spoken English has been considerably more limited than exposure to written English.
- **Comprehension of extended spoken discourse** — such as multi-speaker meetings, telephone calls, or video presentations — will require systematic listening training before becoming functional.
- Exposure to **authentic professional listening input** (recorded meetings, conference calls, short industry presentations) should be built progressively into the training programme from an early stage.

## | 2.5 Speaking

### Assessed Level: A2

| Oral Criterion | Level |
|----------------|-------|
| Fluency        | A2    |
| Grammar        | A2    |
| Vocabulary     | A2    |
| Pronunciation  | B1    |
| Interaction    | A2    |

### Strengths

- **Pronunciation reached B1** — the standout result of the oral assessment. Cédric's phonological production is ahead of all other oral criteria, suggesting a degree of exposure to spoken English and a natural aptitude for English sound production. This is an asset that can support confidence-building in early speaking practice.
- He demonstrates a **willingness to communicate** and attempts to engage with spoken interaction tasks, which is a positive indicator for training responsiveness.
- Basic communicative intentions — self-introduction, expressing preferences, describing his role — can be conveyed, if simply.

### Development Areas

- **Fluency at A2** indicates that spoken output is characterised by **frequent pauses, hesitation, and reformulation** when moving beyond rehearsed or highly familiar topics. Extended spoken turns are not yet sustainable.
- **Grammar in speech (A2)** confirms that the gap observed in written production is equally present in oral production: article omission, preposition errors, and limited syntactic complexity all carry over into spoken English.

- **Vocabulary in speech (A2)** mirrors the narrow range observed in writing. Cédric does not yet have access to professional meeting language (*"I'd like to suggest..."*, *"Could you clarify...?"*, *"In my view..."*, *"To follow up on that point..."*).
- **Interaction at A2** is the most operationally significant gap, given Cédric's professional goals. Participating in meetings, explaining technical problems, and contributing to discussions all require interactive competence — turn-taking, responding to questions, managing communication breakdowns — none of which is yet reliable at B1 level.
- The **disconnect between pronunciation (B1) and all other oral criteria (A2)** suggests that speaking difficulties are primarily cognitive and lexicogrammatical in origin, rather than articulatory. With adequate vocabulary and grammatical support, Cédric's pronunciation asset should facilitate meaningful rapid progress in spoken production.

### 3. Learning Objectives

---

The following three objectives have been designed in accordance with Bloom's Taxonomy and are directly aligned with Cédric's validated professional goals, identified skill gaps, and training entry level. Each objective targets a distinct cognitive and operational level, building progressively from consolidation of form to real-world professional performance.

#### | Objective 1 — Understand and Apply (Grammar & Accuracy)

*> \*By the end of the first training phase (approximately 10 guided hours), Cédric will be able to construct grammatically accurate sentences using English articles (a, an, the, zero article) and key prepositional collocations, demonstrating at least 80% accuracy in both controlled written exercises and short spontaneous speaking tasks on familiar professional topics.*

**Rationale:** Article omission and preposition inaccuracy are the most persistent and impactful error patterns across both written and oral output. These gaps affect professional credibility in written communication (emails, reports) and in spoken interaction alike. Addressing them systematically in the opening phase creates a more reliable grammatical base for all subsequent skills development. This objective integrates both *understanding* (recognition of rules) and *application* (production in context), bridging the observed receptive-productive gap.

**Target skills:** Grammar, Writing, Speaking

**Bloom's level:** Understand → Apply

## | Objective 2 — Apply and Analyse (Professional Communication)

> *\*By the end of the second training phase (approximately 20 guided hours), Cédric will be able to construct and deliver a structured 2-3 minute spoken explanation of a professional problem within his R&D/packaging domain — such as a development delay, a supplier issue, or a specification change — using appropriate cause-and-effect language, basic conditional structures (If this happens, we will need to...), and professional vocabulary, in a simulated work meeting or briefing context.*

**Rationale:** This objective responds directly to Cédric's second validated goal: *"Expliquer un problème simple et proposer une solution."* It moves grammar knowledge from controlled exercise into authentic professional use, requiring Cédric to *select, organise, and deploy* language appropriate to his actual workplace context. The R&D domain specificity ensures that vocabulary and structure practice is immediately transferable to real work situations, maximising motivation and retention.

**Target skills:** Speaking, Vocabulary, Grammar (conditionals, connectors)

**Bloom's level:** Apply → Analyse

## | Objective 3 — Evaluate and Create (Interactive Professional Discourse)

> *\*By the end of the full training programme (40 guided and self-study hours), Cédric will be able to participate in and sustain a professional discussion or short meeting conducted entirely in English — expressing and defending a position, responding to questions, managing turn-taking, and using a range of interaction strategies (I agree with you, however...; Could you give me an example?; What I mean is...; I'd like to add that...) — with sufficient fluency and accuracy to maintain a productive 10-minute professional exchange.*

**Rationale:** This objective represents the culminating performance target of the training programme and directly addresses Cédric's most ambitious validated goal: *"Participer à une discussion ou une réunion courte en exprimant ses idées."* It integrates all five skill areas and requires Cédric to move beyond pre-planned production into genuine interactive competence — the ability to *evaluate* what is being said, formulate a response, and *create* meaning in real time. Achieving this objective would represent a meaningful, demonstrable transition from A2+ to a secure, functional B1.

**Target skills:** Speaking, Listening, Interaction, Vocabulary, Grammar

**Bloom's level:** Evaluate → Create

## 4. Training Plan

## | 4.1 Hours Breakdown

| Component                           | Hours    |
|-------------------------------------|----------|
| Guided coaching sessions            | 30 hours |
| Independent homework and self-study | 10 hours |
| Total programme hours               | 40 hours |

## | 4.2 Target Level

| Entry Level      | A2+ / Lower B1                                                                                                               |
|------------------|------------------------------------------------------------------------------------------------------------------------------|
| Target Level     | B1 (consolidated)                                                                                                            |
| Expected Outcome | Confident functional B1 — able to manage professional emails, explain problems, and participate in short meetings in English |

## | 4.3 Priority Content Areas

The following areas are listed in order of instructional priority, reflecting both the severity of identified gaps and the direct relevance to Cédric's professional goals:

### **\*\*Priority 1 — Grammar Foundations (Articles, Prepositions, Core Tenses)\*\***

- Definite and indefinite articles with a focus on French-interference contexts
- Spatial, temporal, and collocational prepositions (*from, at, in, on, responsible for, interested in*)
- Consolidation of present simple, past simple, and introduction of present perfect
- Future forms: *will, going to*, present continuous for plans

### **\*\*Priority 2 — Professional Oral Communication\*\***

- Meeting language: expressing opinions, agreeing, disagreeing politely, making suggestions
- Problem-explanation structures: *The issue is that..., This is due to..., If we..., we will need to...*
- Asking for and giving clarification: *Could you clarify...?, What I mean is..., Let me rephrase that...*
- Short structured spoken turns (2–3 minute briefings and explanations)

### **\*\*Priority 3 — Vocabulary Expansion\*\***

- Professional and technical vocabulary relevant to R&D, packaging development, and industrial processes
- Discourse connectors and cohesive devices: *however, therefore, although, as a result, in addition*
- Collocations and phrasal verbs in professional contexts
- Replacement of French terms and false cognates with accurate English equivalents

### **\*\*Priority 4 — Writing Development\*\***

- Paragraph building: topic sentence, supporting detail, closing sentence
- Professional email writing: requests, updates, problem notifications
- Syntactic complexity: introduction of subordinate clauses, relative clauses, and conditionals in written production
- Spelling and word-form accuracy for common professional vocabulary

### **\*\*Priority 5 — Listening and Interactive Competence\*\***

- Graded listening tasks: short professional dialogues, recorded meeting extracts, instructional videos
- Listening strategies: identifying keywords, inferring context, tolerating ambiguity
- Turn-taking and real-time interaction practice through role-play scenarios relevant to Cédric's workplace

## **| 4.4 Confirmed Scheduling**

| Confirmed Availability   | Tuesday / Wednesday 12:00-14:00 or after 18:00 |
|--------------------------|------------------------------------------------|
| Confirmed Format         | To be confirmed                                |
| Suggested Session Rhythm | 1 × 90-minute coached session per week         |
| Homework Allocation      | Approximately 30-45 minutes between sessions   |

> **Scheduling Note:** Session timing and format (in-person / remote / hybrid) to be confirmed with the candidate and training coordinator. The Tuesday/Wednesday availability confirmed during assessment allows for a regular twice-weekly rhythm if intensive pacing is preferred, or a consistent once-weekly session with structured homework tasks in alternating weeks.

## **5. Evaluator Narrative Summary**

---

Cédric LOURTEAU presents as a **motivated professional learner at a genuine transitional moment** in his English language development. His combined written and oral profile reveals a candidate who has accumulated a certain passive familiarity with English — sufficient to perform at B1 level when recognising grammar in multiple-choice format and when reading familiar content — but who has not yet consolidated this knowledge into reliable, fluent, or spontaneous language production.

The most diagnostically important finding of this combined evaluation is the **distance between Cédric's receptive and productive competence across both written and oral modalities**. He can identify the correct answer; he cannot yet reliably produce it. He can read moderately complex English; he cannot yet write with structural complexity or lexical range. He reached B1 in pronunciation; he returned A2 in every other oral criterion. This is a coherent and recognisable learner profile — not a cause for concern, but a clear signal that **training must prioritise active, generative language use** from the earliest sessions rather than additional grammar-recognition work.

The oral assessment result — **A2 across listening, speaking, fluency, grammar, vocabulary, and interaction** — is the most operationally significant finding of this report. Cédric's professional objectives are overwhelmingly oral in nature: informal conversation, problem explanation, and meeting participation. These goals require interactive oral competence at B1 level, and the current A2 oral baseline means that the gap between present performance and professional target is wider in speech than it appeared from the written test alone. This should be reflected in how training time is allocated: **speaking and listening activities should constitute the majority of coached session content**, with writing and grammar work supporting oral development rather than replacing it.

Cédric's **pronunciation strength at B1** is a meaningful asset that should be actively leveraged. Learners who produce intelligible, well-articulated English — even when vocabulary and grammar are limited — tend to experience greater interactional success and build confidence more rapidly in speaking tasks. This advantage should be reinforced positively throughout training to sustain motivation during the more demanding work on grammar and vocabulary.

His **self-awareness about his own learning needs** — specifically naming informal conversation, problem-solving communication, and meeting participation as goals — is well-calibrated to his actual level and professional context. Learners who set realistic, contextualised objectives tend to respond well to structured training, and Cédric's profile is consistent with good training responsiveness given adequate support and regular practice.

The **40-hour programme** proposed here — 30 coached hours and 10 hours of independent self-study — is assessed as appropriate and realistic for moving Cédric from a fragile A2+/lower B1 entry point to a **consolidated, professionally functional B1** by the end of the programme. Progress will be most visible in oral interaction and professional vocabulary from mid-programme onward, provided that session content is

consistently grounded in his R&D workplace context and that speaking practice is prioritised at every stage.

With sustained effort and structured guidance, Cédric has every capacity to meet the objectives set out in this report and to
